(a) Canonical Pressure $P(n_b)$ across Junction [GPPVA(DD2) + RG(SLY4)]
M1: Maxwell (1st-Order)
M2: CSS Bridge (2nd-Order)
M3: 3rd Hermite F(ln nb) (2nd-Order)
M4: 3rd Hermite P(mu_b) (2nd-Order)
M5: 5th Hermite F(ln nb) (Exact C^2, dcs2=0)
M6: 5th Hermite P(mu_b) (Exact C^2, dcs2=0)
Pressure P [MeV fm^{-3}]
Baryon density n_b [fm^{-3}]
(b) Grand Canonical Potential $P(\mu_b)$ across Junction
Pressure P [MeV fm^{-3}]
Baryon chemical potential μ_b [MeV]
(c) Sound Speed Squared $c_s^2 = dP/d\varepsilon$ (Exact C^2 Continuity)
c_s^2/c^2
Baryon density n_b [fm^{-3}]
(d) Adiabatic Index $\Gamma = \frac{\varepsilon+P}{P} c_s^2$ across Junction
Adiabatic index Γ
Baryon density n_b [fm^{-3}]
